

**antigonecompact.sty**

**v1.0**

**L<sup>A</sup>T<sub>E</sub>X support files for Softmaker  
Antigone-Compact available at  
<http://www.freefont.de>**

**January 28, 2012**

Package author:  
**Josef Kleber**

This package offers L<sup>A</sup>T<sub>E</sub>X support files for the Softmaker Antigone-Compact fonts available at [www.freefont.de](http://www.freefont.de) in October 2006.

These support files were created with the `installfont` bash script, which is available in CTAN.

## Attention

This package does **not** include the fonts (license restriction). They are or were available for free download at [www.freefont.de](http://www.freefont.de), as well as part of some font collections of [Softmaker](#).

## 1 Antigone-Compact (October 2006)

### 1.1 Package options

The font style file offers the following options:

#### 1.1.1 scaled

You can use the option `scaled` for scaling the font to better match with other fonts, e.g. `\usepackage[scaled=1.03,leading=1.05]{iceberg}`.

#### 1.1.2 leading

For some fonts it might be necessary to increase the leading between lines for a better optical impression, where 1.0 means 100%.

### 1.2 The Font

First of all, you have to get the font. Download it for free at [www.free-font.de](http://www.free-font.de) or get it from [Softmaker](#). Copy the Postscript Type1 fonts `Antigone-Compact-Regular.pfb` and `Antigone-Compact-Italic.pfb` to your local T<sub>E</sub>X tree:

TEXMF:/fonts/type1/softmakerfreefont/AntigoneCompact/

Family	Series	Shape(s)	Example of Typeface	Supported Encodings
<b>6at</b>	<b>m</b>	<b>n</b>	<b>AntigoneCompact</b>	<b>OT1, T1, TS1</b>
<b>6at</b>	<b>m</b>	<b>it</b>	<b><i>AntigoneCompact</i></b>	<b>OT1, T1, TS1</b>
<b>6at</b>	<b>m</b>	<b>sl</b>	<b><i>AntigoneCompact</i></b>	<b>OT1, T1, TS1</b>
<b>6at</b>	<b>m</b>	<b>sc</b>	<b>ANTIGONECOMPACT</b>	<b>OT1, T1, TS1</b>

### 1.3 Installation

The following steps will show you the installation in the case of MiKTeX. For another T<sub>E</sub>X distribution please take a look in its documentation.

- **get** `antigonecompact.tds.zip`
- **extract it in the main directory of your local T<sub>E</sub>X tree**

- **update the FileNameDataBase (FNDB) in MiKTeX Settings or with `initexmf -u`<sup>1</sup> on the command line**
- **include the map file**
  - **run** `initexmf --edit-config-file updmap`
  - **add** `Map antigonecompact.map` **in the opening editor**
  - **save the file and close the editor**
  - **run** `initexmf --mkmaps`

## 1.4 Usage

**If you want to typeset your complete document with the font AntigoneCompact simply add `\usepackage{antigonecompact}` to your preamble. If not, simply add another font package after `\usepackage{antigonecompact}`. You can switch to the font AntigoneCompact with the command `\FFAntigoneCompact`, which is a shortcut for:**

```
\fontfamily{6at}\fontseries{m}\fontshape{n}\selectfont
```

---

<sup>1</sup>for system-wide installations you have to add the `--admin` switch
