v1.4

**L^AT_EX support files for Softmaker
OldBlackletter available at
<http://www.freefont.de>**

January 28, 2012

Package author:
Josef Kleber

This package offers L^AT_EX support files for the Softmaker OldBlackletter fonts available at www.freefont.de in December 2009.

These support files were created with the `installfont` bash script, which is available in CTAN.

Attention

This package does **not** include the fonts (license restriction). They are or were available for free download at www.freefont.de, as well as part of some font collections of [Softmaker](#).

1 OldBlackletter (December 2009)

1.1 Package options

The font style file offers the following options:

1.1.1 scaled

You can use the option `scaled` for scaling the font to better match with other fonts, e.g. `\usepackage-[scaled=1.03,leading=1.05]{iceberg}`.

1.1.2 leading

For some fonts it might be necessary to increase the leading between lines for a better optical impression, where 1.0 means 100%.

1.2 The Font

First of all, you have to get the font. Download it for free at www.freefont.de or get it from [Softmaker](#). Copy the Postscript Type1 font `Old-Blackletter.pfb` to your local TeX tree:

TEXMF:/fonts/type1/softmakerfreefont/OldBlackletter/

Family	Series	Shape(s)	Example of Typeface	Supported Encodings
GoB	m	n	OldBlackletter	OT1, T1, TS1
GoB	m	fl	OldBlackletter	OT1, T1, TS1
GoB	m	lc	OLDBLACKLETTER	OT1, T1, TS1

1.3 Installation

The following steps will show you the installation in the case of MiKTeX. For another TeX distribution please take a look in its documentation.

- get [oldblackletter.tds.zip](#)
- extract it in the main directory of your local TeX tree
- update the `FileNamesDatabase (FDB)` in MiKTeX Settings or with `initexmf -u`¹ on the command line
- include the map file
 - run `initexmf --edit-config-file updmap`
 - add `Map oldblackletter.map` in the opening editor

¹for system-wide installation you have to add the `--admin` switch

- save the file and close the editor
- run `initexmf -mkmeps`

1.4 Usage

If you want to typeset your complete document with the font OldBlackletter simply add `\usepackage{oldblackletter}` to your preamble. If not, simply add another font package after `\usepackage{oldblackletter}`. You can switch to the font OldBlackletter with the command `\FFOldBlackletter`, which is a shortcut for:

```
\fontfamily{6ob}\fontseries{m}\fontshape{n}\selectfont
```

This font offers the following additional ligatures in T1 encoding: ch (<), ck (>), ft (I), t3 (})
